ABSTRACT:

PURPOSE: To form efficiently a uniform diamond coating on the surface of tools and parts by disposing thermion radiating filaments, base body support and gas flow regulating wall in common use as a heater for heating a base body into a synthesizing vessel concentrically with a gas introducing pipe provided at the center of said vessel.

CONSTITUTION: An outside wall 1 of a synthesizing vessel

1 disposed concentrically with a gas introducing pipe 3 provided at the center of the synthesizing vessel and a gas flow regulating wall 5 attached with base body heaters are removed and a base body for wear resistant tools, cutting tools, wear resistant parts, etc. is attached to a base body support 4 and thereafter the wall 1 and the wall 5 are installed. The inside of the vessel is then evacuated by a vacuum pump 9 and after electricity is conducted from a power source 7 to the base body heaters to heat the base bodies to $300 \pm 1,100^\circ\text{C}$, a gaseous mixture consisting essentially of H_2 -CXHY is introduced through an introducing pipe 2 into the vessel. Electric current is conducted at the same time to thermion radiating filaments 3 to heat same to about $1,300^\circ\text{C}$ surface temp. The pressure is regulated to 0.1 ± 100 Torr by opening a valve 8 and a diamond film is formed on the base body surface.

Diox and synthetic appts. using lower pressures - where electron-emitting filaments, substrate to diox and gas rectifier with heater are arranged round gas raw material feed pipe			
C63-084509			
A substrate is heated at 200-1000°C. C. A mixed gas of H ₂ with C ₂ H ₄ etc. at a pressure of 0.1-100 Torr, is activated and fed into a synthesis tank. Novelty is that a gas feed vertical pipe is put in the axial centre of the tank. A filament capable of emitting thermal electrons, substrate heater and gas rectifier with a substrate heater are concentrically put around the gas feed pipe in the tank, so that the mixed gas is fed into the tank through the gas feed pipe and an exhaust gas passing through the gas rectifier is discharged from a space between the rectifier wall and tank. (Opp. No. 1/2)
